

Health Provider Interview (Bempu)

PROVIDER QUESTIONNAIRE INTERVIEW

The Centers for Disease Control and Prevention are assisting UNICEF in an evaluation of the Bebi Kol Kilok medical device program in Papua New Guinea. To monitor and evaluate this program, we are conducting a study to assess provider's knowledge on hypothermia, current practices in neonatal care, and Bebi Kol Kilok.

This questionnaire includes 22 questions about neonatal care and will take approximately 30 minutes to complete. The results from this questionnaire will help us evaluate this program and ensure newborn children are receiving good care. Your participation in this interview is voluntary, and you may stop the interview at any time or decline to respond to any particular question. Your responses will remain anonymous and be seen only by evaluators. You will not be identified by name in any report obtained from this interview and your direct responses will not be shared with anyone from your health facility without removing your name and personal information. The results of this interview are for monitoring and evaluation purposes only.

Consent

Please read the consent form and verbally acknowledge if you are willing to participate, then and check and sign the appropriate box below.

- Yes, I am willing to complete the survey
- No, I am not willing to complete the survey

If you are willing to complete the survey, please write your name below
